

Önemli bir çağrı! "Sularımızı kirli bırakmayalım"

Üç ülkenin işbirliği ile kurulan büyük teknoloji şirketi "Fen Bilimleri Temizlik Teknolojisi" Haliç, İzmir ve İzmit Körfezleri gibi sularımızı "kirli" kaderleri ile başbaşa bırakmamanın yollarını gösteriyor. Fen Bilimleri'ne göre bu suların temizlenmesi düşünüldüğü kadar zor değil. İşte şirketin Kamuya açık çağrısı:

Türk, Amerikan ve Suudi Arabistan ortaklığı ile yabancı sermayeli olarak Türkiye'ye kurulmuş ve faaliyete geçen PERFECT SCIENCE FEN BİLİMLERİ ÇEVRESEL TEMİZLİK TEKNOLOJİSİ LIMITED ŞİRKETİ'nin sahibi olduğu dünyanın bu alandaki en son ve en ekonomik teknolojisi olan PERFECT SCIENCE TEKNOLOJİSİ ile her türlü endüstriyel ve evsel atık suların, kanalizasyonların temizlenmesi, geriye kazandırılması, kapalı bir devreye alınıp daima kullanılması ve kokuyla tamamen giderilmesi, her türlü zararlı mikropların yok edilmesi, buyun bırak hâle getirilerek ilk haline dönüştürülmesi, suyun özelliğinin korunması ve dezenfekte edilmesi, içindeki çamur ve maddelerin (metal hariç) gübreye dönüştürülmesi imkanlarına sahip bulunmaktadır.

Teknoloji ürünümüz, derelerin, göllerin, su ve çöp havzalarının, ırmakların, denizlerin ve okyanusların kesin ve kolay bir sistemle temizlenmesinde çağın en son teknoloji harikasıdır.

Çöplerin Temizlenmesi Özelliği: Teknolojimizle çöplerin tamamen anında ve yerinde dezenfekte edilmesi, yanıcı çöplerin söndürülmesi, bütün yanıcı gazların giderilmesi, havaya karışmasının önlenmesi, hidrokarbonları gübreye dönüştürmek ve çöpin diğer katı atıklarının tamamen endüstriye kazandırılması için kesin bir çözüm getirir. Çöplerin kokularını tamamen yok edip sağlıklı ve iyi bir çalışma ortamına dönüştürür.

Yangın Söndürme Özelliği: Ürünümüz çok iyi bir yangın söndürücüsüdür. Alev almaz ve her türlü yangın söndürmede kesin bir çözümdür. Çığırınan ilk çevre dostu yangın söndürücüsüdür. Özellikle büyük yangınları kolaylıkla kontrol altına alıp hiçbir ateş bırakmayacak şekilde söndürür. Yangından sonra çıkan kirli havayı ve kokuyu tamamen yok eder, uzun süre kalıcı oluşturan ikinci bir yangının çıkmasını önler. Atık yanmış maddeleri gübreye çevirir. Bu özelliği ile Orman yangınlarında yanmış alanın kısa sürede tekrar yeşillenmesini sağlar.

Ayrıca atmosferdeki kirli havayı uçakla sprey ve yağmurlama sistemiyle temizleme özelliğine sahiptir.

Kömür ocaklarından çıkan gazların yok edilmesi, patlamaların önlenmesi, kömürün yıkama usulü ile sulfür oranının düşürülmesi ve ekonomiye kazandırılması, ısı oranının yükseltilmesi özelliği vardır. Endüstri ve kimyasal atıklarla kirlenmiş toprağı temizleyerek, kuru toprakları nemlendirerek tamamen kullanılabilir hâle getirilmesi özelliği vardır.

Doğaya, insanlara ve canlılara hiç bir zararı yoktur. Toksik değildir aksine çok iyi bir doğa temizleyicisidir. Teknoloji maddemiz tamamen korusuz olup, su ile %100 karışır. Renk yapmaz. Bileşimi %93 sudur ve üç serbest elektrondan meydana gelir. Serbest elektronlar enerjiyi kendileri yaratır, hidrokarbonları ve tüm kimyevi maddeleri parçalayıp proteine dönüştürürler. Tabii maddelere hiç bir zarar vermezler madur. Ayrıca Avustralya, Kanada ve İsviçre'de toksit kontrol testleri başarıyla sonuçlanmıştır.

Çağın en son teknoloji harikası olan PERFECT SCIENCE Teknolojimizle Türkiye'de bazı Resmi Kurum ve kuruluşlarda, Belediyelerde, yukarıda belirtilen alanlardaki sorunlu yerlerinde ücretsiz pilot çalışmalar yapılmış, bunlar başarıyla sonuçlandırılmıştır. Bu başarılarımız İçişleri Bakanlığı ve Hacettepe Üniversitesi, T.S.E. Bakanlığının laboratuvar sonuçlarıyla belgelenmiştir. Bu çalışmalarımıza içeren pilot çalışma video bantlarına kaydedilmiştir. Video bantı seyrettiğinizde teknolojimiz hakkında geniş bilgi edinebilirsiniz.

Firmamız tüm pilot çalışmalarını ücretsiz yapar. Teknik sorumluluğunu üzerine alır. Gerekliğinde projelerin finansmanını da kendi sağlar. Firmamız, kuruluşunuzla yukarıda belirtilen çevre kirliliğini oluşturan alanlarda çalışma, sorunlarınızı giderme ve hizmet verme arzusuyla çalışır. Sayın ilgililere ve teknik elemanlarınıza detaylı bilgi vermek için ve gerekirse ücretsiz pilot çalışmaya yapmak ve görüşmelerde bulunmak için görüşme gününün firmamıza bildirilmesi hususunda gereğini enir ve müsaadelerinizi saygıyla arz ederiz.

An Important-Appeal! Keep our Seas Clean

PERFECT SCIENCE, a research and development corporation founded by Turkish, American and Arabian capital, has developed the latest and most economical environmental cleaning technology. THE PERFECT SCIENCE TECHNOLOGY Formula decontaminates sewage streams, detoxifies industrial waste waters and purifies contaminated toxic soils. The PERFECT SCIENCE TECHNOLOGY Formula will destroy coliform bacteria and harmful bacteria and will deodorize as well. It must be noted that during the process of purification

The PERFECT SCIENCE Technology Formula will not harm the environment. The Formula transforms all toxic sludges into bio-nutrients. Heavy metals are not affected.

PERFECT SCIENCE TECHNOLOGY Environmental Purification Technologies are state of the art and will restore all rivers, lakes and oceans with direct and simplified application.

When The PERFECT SCIENCE TECHNOLOGY Formula is applied for decontamination of garbage all toxic hydrocarbons, such as Kerosene are destroyed as well as gases such as carbon dioxide and carbon monoxide. The powerful Formula can be utilized for extinguishing garbage fires and all hydrocarbons and industrial wastes are transformed into bio-nutrients.

During application all odors are destroyed. Furthermore, these bio-nutrients will assist in the rejuvenation of toxic soils into healthy farmlands.

Our Formula is a revolutionary fire-fighting technology. Our Formula is specially formulated to collapse the valuing 'inc process' of toxic hydrocarbons. These are destroyed and transformed into bio-nutrients. The Formula can be easily applied for extinguishing large wood or chemical fires.

The PERFECT SCIENCE TECHNOLOGY Formula can also assist in the rejuvenation of destroyed forests and it will accelerate the development of natural flora and fauna.

The Formula can also be applied for purifying polluted atmospheres by means of aerial application.

For application on coal the formula can be utilized for desulphurization of coal and can be used to control oil fires and explosions. Applied correctly the formula can increase the heat output from coal.

For remediation of toxic waste dumps The PERFECT SCIENCE TECHNOLOGY Formula purifies soils contaminated with industrial toxic waste and restores the soils for agricultural.

Successful control tests on toxic materials have been conducted in Austria and Canada with no damage to humans, nature or other biological life.

The Formula is non-toxic and is safe for all forms of environmental restoration. The formula has no odor, is 93% water in its concentrated form and can be further diluted depending on the type of pollution. The molecule with in our formula consists of 3 free electrons which rupture the molecular bonds of hydrocarbons without the addition of energy.

This unique form of electron energy released by the formula is not harmful to the environment.

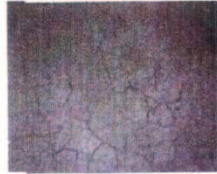

The PERFECT SCIENCE TECHNOLOGY Environmental remediation technologies have been successfully validated by tests conducted by foundations and municipalities in Türkiye. All results have been documented by The Ministry of the Interior, Hacettepe University and The Turkish Standards Institution. PERFECT SCIENCE TECHNOLOGY has prepared a video documentation of the above research as well.

Our Company is pleased to assist in pilot test research free of charge. We accept all liabilities for technical work. If needed, we can assist in arranging the funding for environmental purification projects.

Our company very much wishes to work with your corporation in the field of environmental purification. We look forward to meeting with you to discuss these matters in detail and developing the parameters of specific pilot project research.

Suyun doğadaki ilk haline dönüştürülmesi

PERFECT SCIENCE TEKNOLOJİSİ ile toprağın verimli hâle getirilmesi

Çöplerin kirliliğinin engellenmesi PERFECT SCIENCE TEKNOLOJİSİ ile gerçekleştirilmiştir

Perfect Science Technologies - Options for Humanity

FOR IMMEDIATE RELEASE

Istanbul, Turkey, January 3, 1996

The following statement is being addressed to Mikhail Gorbachev of the International Green Cross, Dr. Wally N' Dow, Secretary General of The Second United Nations Conference on Human Settlements (Habitat II), The World Bank, The World Health Organization, The White House and Ms. Carol Browner, Administrator of the United States Environmental Protection Agency.

On January 3, 1996 Perfect Science received full approval from the Turkish Standards Institution for implementation of the Perfect Science Environmental Purification Technologies.

Perfect Science took emergency action here today to halt to world-wide flood of hydrocarbon pollution by calling for geopolitical adoption and accelerated implementation of a global delivery system for its patented Environmental Cleansing Formulae and Technologies. The Perfect Science Chairman announced details of what he called a new "direct business" format. He said Perfect Science was prepared to grant each of the world's 216 independent states controlling interest in individual joint ventures and was prepared to accept payment from them in countertrade, with barter levels based on a sliding scale of energy use per capita, in order, he said, "to permit simultaneous adoption and participation by all the world's governments."

The Perfect Science chairman described the Perfect Science Formulae as the master key for unlocking the entire complex of hydrocarbon substances, as well as all the other organic chemicals, that are currently laying siege to and disabling the earth's soil, water and atmosphere. "Having the passkey to organic chemistry means you can clean up all carbonaceous fuels and everything petrochemical from cradle to grave," he added. "But in addition to neutralizing all the poisonous effects, the Perfect Science Formulae will renovate industrial processes at all levels and in all sectors, permitting continued economic expansion without environmental debacle."

"The sudden and thoroughgoing revision of all organic chemistry," he continued, "will require similar revision of the industrial, financial and insurance matrices within each sovereign state. Moreover it is the responsibility, and it will become the duty, of each government to take effective measures locally for rescuing its people and region. This task will naturally include the proper co-ordination and regulation of the Perfect Science Formulae."

The Perfect Science chairman stated further that the projected rescue of the planetary environment by the emergency implementation of the Perfect Science Formulae will simultaneously produce at least six other major stabilizations:

- of energy supply and demand
- of insurance markets
- of unfunded liabilities
- of soft currencies
- of international relations

HABİTAT BİLDİRİSİ - İSTANBUL / TÜRKİYE

03.Ocak.1996

- of national debts and revenues

Mikhail Gorbachev's speech delivered at the Fourth International Global Forum conference in Kyoto, Japan delineated the grave implications of a breakdown in the stability of the biosphere and the potential planetary catastrophe that might ensue. Mr. Gorbachev called for all nations and each individual to bring to bear all their efforts for the cause of human survival. It is now a well known fact that the severe disruption of global ecosystems is the direct result of 140 years of irresponsible industrialization resulting in the extensive contamination by hydrocarbons and petrochemicals of sovereign atmospheres, lands, surface waters and critical drinking water supplies. It is no understatement to say that these deadly industrial wastes have brought ecosystems around the world to the precarious state of potential collapse. As more and more third world countries enter into industrialization for the benefit of their economies, the added pressure of their industrial wastes, improperly dealt with, will most certainly result in the drastic destabilization of planetary ecosystems. Mr. Gorbachev clearly stated in his address that the foundations of human existence could be undermined, threatening life on earth.

Although these issues of industrial and economic development are complex and are interwoven with cultural and social trends internationally, three major challenges can be identified for discussion. The first major challenge is the intensive remediation of global environments which have become supersaturated with toxic hydrocarbon and petrochemical wastes. This task will require the development of environmental purification technologies which must be applicable for wide scale, cost effective implementation. The second major challenge is the complete restructuring of industrial toxic waste stream management which to date is based upon the premise of irresponsible disposal and dumping of toxic wastes into the global environments. This task will require the development of broad based cost effective neutralization technologies which will eliminate the continuation of industrial toxic waste stream disposal into the environment. The third major challenge is the renovation of The Liquid Fuel Cycle which has been supplying global industry and commerce with fuels that cause massive and aggravated pollution of global atmospheres due to incomplete combustion. This task will require the development of technologies for the construction of new clean burning hydrocarbon eco-fuels, that will permit, through complete combustion, continued use of the vast stockpiles of hydrocarbons available for industry and commerce without the backlash of environmental degradation.

It is the great pleasure of Perfect Science, at this time, to announce that Perfect Science has finalized historic research and development in the above mentioned fields of environmental remediation, industrial toxic waste stream neutralization, and clean burning hydrocarbon eco-fuels. Perfect Science engineers have developed methodologies for the in situ destruction of toxic hydrocarbon and petrochemical wastes. These methodologies can be applied for macro-purification of polluted atmospheres, toxic soils, contaminated surface waters, poisoned drinking water supplies and urban sewage streams. The Perfect Science in situ Purification Technologies render all hydrocarbon and petrochemical pollutants into bio-nutrients. Toxic surface waters have been completely purified and restored for aquatic life. Toxic soils have been completely purified and restored for agricultural production. Toxic drinking water supplies have been completely purified and restored for human consumption. Through aerial application, polluted atmospheres have been completely cleansed.

With regard to neutralization of industrial toxic waste streams Perfect Science has finalized research and development for technologies that thoroughly cleanse industrial waste streams by settling out all heavy metals and at the same time completely destroy in situ toxic chemicals, thereby rendering all industrial effluents suitable for disposal into the environment. Perfect Science has developed for industry advanced fire suppression and fire fighting technologies which make possible, for the first time in industrial history, the collapse of toxic explosive vapor domes prevalent wherever industrial chemicals are stored and utilized. The Perfect Science Technologies, by successfully collapsing volatile vapor domes of explosive chemicals, can effectively eliminate the threat of

2

HABİTAT BİLDİRİSİ - İSTANBUL / TÜRKİYE

03.Ocak.1996

aggravated industrial disasters resulting from the use and storage of explosive chemicals.

Thirdly, the renovation of the Liquid Fuel Cycle is a clear priority for mankind at this juncture in human history during which time all industry and commerce worldwide are dependent on a variety of hydrocarbon fuels for their diverse requirements. The simple tragedy of these hydrocarbon fuels is their inability to experience complete combustion during their use. Whether these hydrocarbons are in the form of heavy crudes, coal slurries or diesel fuels the inability for these fuels to completely combust on a molecular level renders vast devastation of global atmospheres. Perfect Science has finalized research and development for the construction of revolutionary clean burning hydrocarbon eco-fuels. Quite simply, The Perfect Science Technologies permit complete and total combustion of all liquid hydrocarbon fuels. The Perfect Science Technologies also purify these hydrocarbon fuels of unwanted sulphur and other minerals. As can be easily surmised regarding the above developments, this process of complete combustion will render a vastly increased yield where each molecule of hydrocarbon fuel will now be utilized during the combustion process.

In truth, Perfect Science has laid the foundation for a new global reality of petrochemistry where the science of hydrocarbons merges with the science of water. From time immemorial water has served as the primary medium for the innumerable complex chemical reactions needed to sustain all life. Within this aqueous medium, at ambient temperatures, chemical reactions are constantly supporting the simplest of micro-organisms to the most complex of species, Man himself. Most certainly, without the complex chemistry of water, all planetary life would cease to exist. Truly, then, the science of water is the chemistry for life.

In the view of history the science of water and the science of hydrocarbons have been at odds. The science of hydrocarbons, with its man-made complex chemical reactions, has supplied much bounty to mankind. However, within aqueous mediums at ambient temperatures, hydrocarbon chemical reactions have been impossible. All that has now been changed forever. Today, I bring to you a new science of petrochemistry where the complex science of water and the complex science of hydrocarbons are joined as one. Here, within this new petrochemistry, unlimited chemical reactions, heretofore impossible, are now manifested easily, perfectly. Here, within this new petrochemistry, the true science of hydrocarbons will blossom forth and the blessings of Our Creator will be multiplied a thousandfold.

Perfect Science is therefore pleased to announce that it has finalized research and development pertaining to historic scientific advancements in the field of petrochemistry. Perfect Science has developed Formulae, in the form of aqueous based phase transfer catalysts, which have the remarkable capability of reducing or increasing the molecular weight of hydrocarbons in aqueous mediums at ambient temperatures. This remarkable scientific accomplishment is made possible because The Perfect Science Phase Transfer Catalysts disrupt the hydrogen bonding attractive forces of water molecules. This disruption drastically collapses the interfacial tension of water molecules and transforms water in the True Universal Solvent. This new Universal Solvent now has the capacity, for the first time in history, to disrupt the inter-molecular attractive forces binding hydrocarbon molecules (van der Waals force) at ambient temperatures. As a result of this phenomenal action initiated by the Perfect Science Catalysts, the hydrocarbon molecules are placed into micro-fine colloidal dispersions. The hydrocarbons are completely dissolved within this new Universal solvent. Aqueous solutions are now created with hydrocarbons in which new and vastly accelerated chemical reactions can take place. Science has determined that the rates of the fastest chemical reactions in aqueous mediums are determined simply by the encounter frequency (frequency of collision) of the reactants or solute particles. By placing hydrocarbons into micro-fine colloidal dispersions the Perfect Science Phase Transfer Catalysts initiate an exponential increase in the frequency of collision of the solute particles within the transformed aqueous medium. This exponential increase in the frequency of collision of the solute particles will permit an unlimited number of accelerated chemical reactions.

3

HABİTAT BİLDİRİSİ - İSTANBUL / TÜRKİYE

03.Ocak.1996

whereby unprecedented oxidation reduction reactions (electron transfer) can take place at ambient temperatures.

The historic capacity of the Perfect Science Phase Transfer Catalysts to reduce or increase the molecular weight of hydrocarbons at ambient temperatures will transform the Liquid Fuel Cycle from cradle to grave. Applied to current hydrocarbon related activities the Perfect Science Catalysts will streamline all phases of extraction, transportation, production, processing, distribution and utilization of hydrocarbons.

Perfect Science has engineered specific Phase Transfer Catalysts for application throughout the following hydrocarbon Sciences: enhanced oil reservoir stimulation; viscosity reduction for pipeline transmission; desulphurization; cold cracking; low energy refining; new petrochemicals development; new plastics production; fire suppression and spontaneity inhibition; fuel additives for complete combustion; toxic materials clean-up and disposal; oil storage tank maintenance; by-product neutralization; waste water treatment and environmental remediation of polluted waters and polluted soils.

In summary, clean energy, clean industry and a clean environment are the hallmarks of The Perfect Science Technologies. The advent of The Perfect Science Technologies truly satisfies the dual demands of continued worldwide industrial growth and environmentally sustainable development. In brotherhood, let us conjoin our mutual visions of peace, prosperity and ecological responsibility for the benefit of all nations, their peoples, and the planet that sustains us all.

PERFECT SCIENCE

ISTANBUL, TURKEY

Policy Paper

The Perfect Science Policy, supporting the Worldwide Purification Program is; to assist all sovereign nations to:

1. Balance their toxic ecosystems by remediation and regenerating their atmospheres, oceans, surface waters, soils and surface waters which have become poisoned to the extreme by hydrocarbons, petrochemicals, chlorinated synthetic compounds and human waste streams;
2. Renovate their liquid/fossil fuel cycles by streamlining and detoxifying all phases of extraction, transportation, processing, utilization and disposal of hydrocarbons.
3. Retool their industrial manufacturing sectors by neutralizing toxic waste water streams and eliminating toxic waste production through replacement of toxic solvent technologies with nontoxic replacements.

The Perfect Science Worldwide Purification Program has therefore been structured to encompass these three critical sovereign adjustments. To accomplish these primary objectives, Perfect Science must identify the appropriate scientific research institutes within each sovereign nations that have the capacity to aggressively integrate the Perfect Science Technologies simultaneously within that nation's academia, public sectors and private sectors for the benefit of their peoples and their economies.

Dear Mr. Doyuk,

As you would be aware, the theme for World Water Day 1996 has been chosen to be "Water for Thirsty Cities". The focus of the theme on the growing water crisis across the world is very timely and coincides well with the forthcoming United Nations Second Conference on Human Settlements (Habitat II) to be held in Istanbul in June 1996. Indeed, we hope, the observance of World Water Day 1996 will be an important milestone on the road to Istanbul.

I am pleased to inform you in this context that UNCHS (Habitat) has been designated the lead agency within the United Nations system to coordinate system-wide efforts for the observances on the occasion of World Water Day in 1996.

While the focus of observances will be at country level, several regional initiatives are also under way in Africa, Asia, and Latin America which we are supporting with the help of our partners in the region.

The Government of China has offered to host the global observance on World Water Day 1996 in Beijing. UNCHS (Habitat) and UNEP in cooperation with the Ministry of Housing, Physical Planning and Environment (VROM) of the Government of the Netherlands are organizing a series of events in Beijing from 18-22 March 1996. Several other United Nations Agencies and bi-lateral donor agencies are also actively involved in these events. Attached is an aide-memoire for the events in Beijing for your information. You may also like to access all information related to World Water Day preparations on World Wide Web at: <http://www.unch.unon.org/habitat/>

As you will see from the aide-memoire, the events in Beijing include a major international water conference, an eminent persons' meeting, a children's event and an international exhibition.

We are very pleased to invite your organization to attend and participate actively in the Beijing events and also look forward to your support and cooperation in the organization of these events.

Specifically, I invite your attention to the International Water Conference in Beijing. The Conference is being jointly organized by UNCHS (Habitat) and UNEP in Cooperation with the Dutch Ministry of Housing and Physical Planning and Environment (VROM). We are expecting about 120 to 150 international participants to the Conference including representatives of external support agencies and development banks. In addition, about 75 to 100 national participants are expected to attend the Conference.

We should also be grateful if it would be possible for you to prepare a case study on successful water and/or waste water management in Istanbul. A suggested format for the presentation of case studies is in the Aide-Memoire. We would require the complete paper at the end of the month.

Looking forward to seeing you in Beijing.

Yours sincerely

Sering B.O. Jallow
